DB0201EN-PeerAssign-v5 SQLite

February 11, 2023

Assignment: Notebook for Peer Assignment

1 Introduction

Using this Python notebook you will:

- 1. Understand three Chicago datasets
- 2. Load the three datasets into three tables in a Db2 database
- 3. Execute SQL queries to answer assignment questions

1.1 Understand the datasets

To complete the assignment problems in this notebook you will be using three datasets that are available on the city of Chicago's Data Portal:

- 1. Socioeconomic Indicators in Chicago
- 2. Chicago Public Schools
- 3. Chicago Crime Data

1.1.1 1. Socioeconomic Indicators in Chicago

This dataset contains a selection of six socioeconomic indicators of public health significance and a "hardship index," for each Chicago community area, for the years 2008 - 2012.

A detailed description of this dataset and the original dataset can be obtained from the Chicago Data Portal at: https://data.cityofchicago.org/Health-Human-Services/Census-Data-Selected-socioeconomic-indicators-in-C/kn9c-c2s2

1.1.2 2. Chicago Public Schools

This dataset shows all school level performance data used to create CPS School Report Cards for the 2011-2012 school year. This dataset is provided by the city of Chicago's Data Portal.

A detailed description of this dataset and the original dataset can be obtained from the Chicago Data Portal at: https://data.cityofchicago.org/Education/Chicago-Public-Schools-Progress-Report-Cards-2011-/9xs2-f89t

1.1.3 3. Chicago Crime Data

This dataset reflects reported incidents of crime (with the exception of murders where data exists for each victim) that occurred in the City of Chicago from 2001 to present, minus the most recent

seven days.

A detailed description of this dataset and the original dataset can be obtained from the Chicago Data Portal at: https://data.cityofchicago.org/Public-Safety/Crimes-2001-to-present/jjzp-q8t2

1.1.4 Download the datasets

This assignment requires you to have these three tables populated with a subset of the whole datasets.

In many cases the dataset to be analyzed is available as a .CSV (comma separated values) file, perhaps on the internet. Click on the links below to download and save the datasets (.CSV files):

- Chicago Census Data
- Chicago Public Schools
- Chicago Crime Data

NOTE: Ensure you have downloaded the datasets using the links above instead of directly from the Chicago Data Portal. The versions linked here are subsets of the original datasets and have some of the column names modified to be more database friendly which will make it easier to complete this assignment.

1.1.5 Store the datasets in database tables

To analyze the data using SQL, it first needs to be loaded into SQLite DB. We will create three tables in as under:

- 1. CENSUS DATA
- 2. CHICAGO PUBLIC SCHOOLS
- 3. CHICAGO CRIME DATA

Let us now load the ipython-sql extension and establish a connection with the database

- Here you will be loading the csv files into the pandas Dataframe and then loading the data into the above mentioned sqlite tables.
- Next you will be connecting to the sqlite database **FinalDB**.

Refer to the previous lab for hints.

Hands-on Lab: Analyzing a real World Data Set

```
[1]: %load_ext sql

[2]: import csv, sqlite3
    con = sqlite3.connect("Final.db")
    cur = con.cursor()

[3]: !pip install -q pandas==1.1.5

[4]: %sql sqlite:///Final.db
```

```
[5]: import pandas
     df = pandas.read_csv("https://cf-courses-data.s3.us.cloud-object-storage.
      →appdomain.cloud/IBMDeveloperSkillsNetwork-DB0201EN-SkillsNetwork/labs/
      →FinalModule_Coursera_V5/data/ChicagoCensusData.csv")
     df.to_sql("CENSUS_DATA", con, if_exists='replace', index=False,method="multi")
     df = pandas.read_csv("https://cf-courses-data.s3.us.cloud-object-storage.
      →appdomain.cloud/IBMDeveloperSkillsNetwork-DB0201EN-SkillsNetwork/labs/
      →FinalModule_Coursera_V5/data/ChicagoCrimeData.csv")
     df.to_sql("CHICAGO_CRIME_DATA", con, if_exists='replace', index=False,
      →method="multi")
     df = pandas.read_csv("https://cf-courses-data.s3.us.cloud-object-storage.
      →appdomain.cloud/IBMDeveloperSkillsNetwork-DB0201EN-SkillsNetwork/labs/
      →FinalModule_Coursera_V5/data/ChicagoPublicSchools.csv")
     df.to_sql("CHICAGO_PUBLIC_SCHOOLS", con, if_exists='replace', index=False,
      →method="multi")
    /home/jupyterlab/conda/envs/python/lib/python3.7/site-
    packages/pandas/core/generic.py:2615: UserWarning: The spaces in these column
    names will not be changed. In pandas versions < 0.14, spaces were converted to
    underscores.
      method=method.
[6]: | %sql SELECT name, type, length(type) FROM_
      ⇒PRAGMA_TABLE_INFO('CHICAGO_PUBLIC_SCHOOLS');
     * sqlite:///Final.db
    Done.

('LONGITUDE', 'REAL', 4),
('LOCATION', 'TEXT', 4)]
```

1.2 Problems

Now write and execute SQL queries to solve assignment problems

1.2.1 Problem 1

Find the total number of crimes recorded in the CRIME table.

```
[9]: %sql SELECT COUNT(*) as count_of_crimes FROM CHICAGO_CRIME_DATA
```

```
* sqlite:///Final.db
```

[9]: [(533,)]

1.2.2 **Problem 2**

List community areas with per capita income less than 11000.

```
[10]: %sql SELECT COMMUNITY_AREA_NAME, PER_CAPITA_INCOME FROM CENSUS_DATA \
WHERE PER_CAPITA_INCOME < 11000
```

```
* sqlite:///Final.db
```

1.2.3 Problem 3

List all case numbers for crimes involving minors?(children are not considered minors for the purposes of crime analysis)

```
[11]: %sql SELECT CASE_NUMBER, DESCRIPTION FROM CHICAGO_CRIME_DATA \
WHERE DESCRIPTION LIKE '%MINOR%'
```

```
* sqlite:///Final.db
     Done.
[11]: [('HL266884', 'SELL/GIVE/DEL LIQUOR TO MINOR'),
       ('HK238408', 'ILLEGAL CONSUMPTION BY MINOR')]
     1.2.4 Problem 4
     List all kidnapping crimes involving a child?
[13]: %sql SELECT CASE_NUMBER, PRIMARY_TYPE, DESCRIPTION FROM CHICAGO_CRIME_DATA \
      WHERE PRIMARY TYPE LIKE '%KIDNAPPING%' AND DESCRIPTION LIKE '%CHILD%'
      * sqlite:///Final.db
     Done.
[13]: [('HN144152', 'KIDNAPPING', 'CHILD ABDUCTION/STRANGER')]
     1.2.5 Problem 5
     What kinds of crimes were recorded at schools?
[19]: | %sql SELECT DISTINCT PRIMARY_TYPE, LOCATION_DESCRIPTION FROM CHICAGO_CRIME_DATAL
       →\
      WHERE LOCATION_DESCRIPTION LIKE '%SCHOOL%'
      * sqlite:///Final.db
     Done.
[19]: [('BATTERY', 'SCHOOL, PUBLIC, GROUNDS'),
       ('BATTERY', 'SCHOOL, PUBLIC, BUILDING'),
       ('CRIMINAL DAMAGE', 'SCHOOL, PUBLIC, GROUNDS'),
       ('NARCOTICS', 'SCHOOL, PUBLIC, GROUNDS'),
       ('NARCOTICS', 'SCHOOL, PUBLIC, BUILDING'),
       ('ASSAULT', 'SCHOOL, PUBLIC, GROUNDS'),
       ('CRIMINAL TRESPASS', 'SCHOOL, PUBLIC, GROUNDS'),
       ('PUBLIC PEACE VIOLATION', 'SCHOOL, PRIVATE, BUILDING'),
       ('PUBLIC PEACE VIOLATION', 'SCHOOL, PUBLIC, BUILDING')]
     1.2.6 Problem 6
     List the average safety score for each type of school.
[22]: %sql SELECT "Elementary, Middle, or High School", AVG(SAFETY_SCORE) \
      FROM CHICAGO PUBLIC SCHOOLS GROUP BY "Elementary, Middle, or High School"
      * sqlite:///Final.db
     Done.
[22]: [('ES', 49.52038369304557), ('HS', 49.62352941176471), ('MS', 48.0)]
```

1.2.7 Problem 7

```
List 5 community areas with highest % of households below poverty line
```

```
[29]: %sql SELECT COMMUNITY_AREA_NAME, PERCENT_HOUSEHOLDS_BELOW_POVERTY \
FROM CENSUS_DATA \
ORDER BY CAST(PERCENT_HOUSEHOLDS_BELOW_POVERTY AS DECIMAL) \
DESC LIMIT 5

* sqlite:///Final.db
Done.

[29]: [('Riverdale', 56.5),
    ('Fuller Park', 51.2),
    ('Englewood', 46.6),
    ('North Lawndale', 43.1),
    ('East Garfield Park', 42.4)]

1.2.8 Problem 8
```

Which community area is most crime prone?

```
[35]: %sql SELECT COMMUNITY_AREA_NUMBER , COUNT(*) as total_crimes \
FROM CHICAGO_CRIME_DATA \
WHERE COMMUNITY_AREA_NUMBER != 'None' \
GROUP BY COMMUNITY_AREA_NUMBER \
ORDER BY total_crimes DESC \
LIMIT 1
```

```
* sqlite:///Final.db
Done.
```

[35]: [(25.0, 43)]

Double-click **here** for a hint

1.2.9 Problem 9

Use a sub-query to find the name of the community area with highest hardship index

```
[45]: %sql SELECT COMMUNITY_AREA_NAME, HARDSHIP_INDEX \
FROM CENSUS_DATA \
WHERE HARDSHIP_INDEX = (SELECT MAX(CAST(HARDSHIP_INDEX AS DECIMAL)) FROM

→CENSUS_DATA)
```

```
* sqlite:///Final.db
```

```
[45]: [('Riverdale', 98.0)]
```

1.2.10 Problem 10

Use a sub-query to determine the Community Area Name with most number of crimes?

[50]: %sql SELECT COMMUNITY_AREA_NAME FROM CENSUS_DATA \
WHERE COMMUNITY_AREA_NUMBER = (SELECT COMMUNITY_AREA_NUMBER \
FROM CHICAGO_CRIME_DATA \
GROUP BY COMMUNITY_AREA_NUMBER \
ORDER BY COUNT(*) DESC LIMIT 1)

* sqlite:///Final.db

[50]: [('Austin',)]
